PROFESSIONAL SUMMARY

Backend Software Engineer with hands-on experience developing and maintaining production backend systems using **Java, Kotlin, Spring Boot, Maven, and Microsoft Azure**. Experience with Kotlin microservices, mixed Java/Kotlin JVM codebases, REST APIs, production troubleshooting, and application and database performance optimization. Experienced in enterprise development environments and direct customer collaboration, including requirements clarification and explaining technical implementation decisions to customer stakeholders.

EXPERIENCE

- **CGI** Prague, Czech Republic
December 2025 – Present
Programmer Analyst
 - **Backend Development:** Developing and maintaining enterprise backend applications primarily using Java and Spring Boot, with selected services and components implemented in Kotlin and Python.
 - **Kotlin and JVM Development:** Contributed to production Kotlin and Spring Boot microservices and worked with mixed Java/Kotlin JVM codebases using Maven for project builds and dependency management.
 - **BankID Platform:** Implemented and maintained backend functionality using Kotlin and Spring Boot, including REST endpoints, business logic, integrations, automated tests, refactoring, and bug fixes. Improved performance through application-level and database/query optimizations.
 - **Cloud and Distributed Systems:** Working with Microsoft Azure services including Azure Functions and Azure Event Hub for event-driven backend processing, and Redis for caching and efficient data access.
 - **Production Support:** Participating in the team's L3 production support rotation, investigating and helping resolve production issues in enterprise backend systems.
 - **Customer Collaboration:** Collaborated directly with BankID customer representatives and management, including discussing requirements and explaining technical solutions and implementation decisions.
- **T-Mobile Czech Republic (Part-time)** Prague, Czech Republic
March 2024 – December 2025
Software Engineer Trainee
 - **Customer Requirements:** Analyzed customer requirements and translated them into technical implementation tasks while considering technical feasibility and business needs.
 - **Customer Communication:** Communicated directly with customers when defining frontend requirements, discussing technical feasibility, and explaining implementation constraints and available solutions.
 - **Backend Development:** Developed backend applications using Java and Spring Boot and frontend functionality using TypeScript and Vue/Nuxt.
 - **REST API Design:** Designed and redesigned REST APIs to improve structure, usability, maintainability, and integration with other application components.
 - **Application Architecture:** Contributed to application and module design, including persistence, service, and controller layers using layered architecture principles.
 - **Technical Documentation:** Created UML diagrams, technical documentation, and descriptions of module and system interactions.
- **T-Mobile Czech Republic (Part-time)** Prague, Czech Republic
July 2023 – September 2023
Junior Java Developer
 - **Java Development:** Contributed to the development and maintenance of internal applications using Java.
 - **Code Quality:** Participated in debugging, code reviews, and implementation of maintainable backend code.

SELECTED PROJECTS

- **BankID Platform [Work Project]:** Production microservice platform in the digital identity and financial services domain based on Kotlin and Spring Boot. Implemented backend functionality including REST endpoints, business logic, integrations, automated tests, refactoring, and bug fixes. Worked on application-level and database-level performance improvements and communicated technical solutions directly with customer stakeholders.
- **Sazka / Allwyn Backend Systems [Work Project]:** Enterprise backend development and maintenance using primarily Java and Spring Boot. The systems use Microsoft Azure services such as Azure Functions and Azure Event Hub for event-driven processing, Redis for caching and efficient data access, and cloud-hosted databases. Also participate in L3 production support.
- **ENGDat Platform [Work Project]:** Microservice-based data integration platform for automated exchange, validation, and transformation of technical documentation and engineering messages. Contributed to backend development, API design, and parts of the application's technical design.

- **MB-TOOL WebEDI [Work Project]:** Web-based logistics platform for delivery note generation, delivery forecasting, ASN creation, and EDI conversions. Contributed to application development while working at T-Mobile Czech Republic.
- **Anketa CTU [University Project]:** Worked for two semesters on a Kotlin-based web platform for university course evaluation at CTU in Prague. Developed application functionality using Kotlin and Gradle as part of a team project supporting surveys, anonymous feedback, statistics, and instructor feedback.

TECHNICAL SKILLS

- **Languages:** Java, Kotlin, SQL, Python, TypeScript/JavaScript, C/C++, Scala
- **Backend and JVM:** Spring Boot, JVM, REST APIs, Microservices, JPA/Hibernate, Redis
- **Cloud and Integration:** Microsoft Azure, Azure Functions, Azure Event Hub, Event-Driven Architecture
- **Build and Development Tools:** Maven, Gradle, Git, CI/CD, Liquibase, Flyway
- **Databases:** PostgreSQL, SQL Databases
- **Architecture:** Layered Architecture, Microservices, REST API Design, Modular Application Design
- **Frontend:** Vue, Nuxt, TypeScript

EDUCATION

- | | |
|--|------------------------------|
| • Czech Technical University, Faculty of Information Technology | Prague, Czech Republic |
| • <i>B.Sc. in Software Engineering (Part-time)</i> | <i>Sep. 2025 – Present</i> |
| • Czech Technical University, Faculty of Information Technology | Prague, Czech Republic |
| • <i>B.Sc. in Software Engineering</i> | <i>Sep. 2022 – Feb. 2025</i> |

LANGUAGES

- **English:** Upper-Intermediate (B2)
- **Czech:** Native
